DETAILED ACTION

1. This application is in condition for allowance except for the following formal matters:

Specification

- a. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Objections

- b. Claim 27 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim 27 has just repeated the subject matter "noise removing unit for estimating ... contained in the time domain signal" as claimed in claim 22, therefore, it is not further limiting the subject matter of the previous claim.

Prosecution on the merits is closed in accordance with the practice under *Ex parte*

Quayle, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Allowable Subject Matter

2. The following is a statement of reasons for the indication of allowable subject matter: the prior art fails to show or fairly suggest a channel equalizer for restoring an original signal from a digital TV receiving signal having passed through a channel having the combinations as claimed, including a channel estimation unit for estimating a finite impulse response estimation value of a channel by estimating an impulse response of a transmission channel from a received signal having passed through the channel, and a channel distortion compensation unit for compensating for the channel distortion of the received signal by using the time impulse response estimated in a frequency domain after converting the received signal and the estimated impulse response into the frequency domain, respectively, and for converting the received signal into a time domain again, as recited in the claims.
